

# UPI Transactions Analysis Dashboard Report

## Executive Summary

This project analyzes UPI transaction data using an interactive Power BI dashboard to generate meaningful business insights and support data-driven decisions.

## Project Objective

Analyze transaction trends, understand user behavior, compare banking activities, and create an interactive dashboard experience.

## Key Insights

Month-wise transaction trends, spending patterns, city-wise analysis, bank-wise analysis, and user behavior based on age, gender, and device type.

## Dashboard Features

Interactive filtering, Sync Slicers, Bookmarks, Selection Pane, and dynamic navigation.

## Tools Used

Power BI, Data Cleaning, Data Transformation, and Data Visualization.

## Learning Outcomes

Improved data storytelling, analytical thinking, dashboard design, and business intelligence skills.

## Conclusion

This project demonstrates how raw UPI transaction data can be transformed into actionable insights through interactive visualizations.
